LOCALITY	Lighthouse Point Trail		
DESCRIPTION OF LOCALITY	nature trail		
DATE + COLL.	July 20/76	R.C. Simpson	
OTHER COLL.		40	COLL. NOS.

BINOMIAL	<i>Tylobolus Sellenus</i>		
SSP/VAR/F.	Cap tan brown, gills white to pinkish age, now boletoid.		
HABITAT	on old buried cedar? logs, gills decurrent adnexed		
NOTES	stain tardily liquid brown, stalk white w/ brown reticulations - spores pinkish brown	COLL. NO. 40	
		NO. OF REPLICATES	
BINOMIAL	<i>Lactarius velvus</i>		
SSP/VAR/F.	Cap, floccose cinnamon, gills yellow tan, bleed watery,		
HABITAT	in sphagnum of low cedar swamp.		
	stalk cinnamon white, odor of spicy walnut.		
NOTES	gills decurrent	COLL. NO. 41	
		NO. OF REPLICATES	
BINOMIAL	<i>Lactarius</i>		
SSP/VAR/F.	Cap moist cinnamon, gills & stalk light whitish tan, decurrent,		
HABITAT	moist cedar swamp.		
	bleeds yellow		
NOTES		COLL. NO. 42	
		NO. OF REPLICATES	

Bolete photo.

photo

photo

BINOMIAL <i>Russula emetica</i>	
SSP/VAR/F. Cap bright red, gills (decurent) ; stalk white odor	
HABITAT - under red oak and beech - sugar maple.	
of meal. - these caps were very bright red.	
NOTES - very wormy, under	COLL. NO. 43
NO. OF REPLICATES	

photo

BINOMIAL <i>Tylobolus feldeus</i>	
SSP/VAR/F. Cap tan cracked edge, gills whitish pink, not decurrent	
HABITAT	
non boletenoid, stalk offwhite w/ brown reticulations.	
NOTES - very similar if not identical to #40 is same	COLL. NO. 44
- tardily stains light brown. on an old stump.	NO. OF REPLICATES

photo

BINOMIAL <i>Russula</i>	
SSP/VAR/F. Cap mauve-purple, gills white filled w/ spring tails(?)	
HABITAT - on ground deciduous forest	
adnate; stalk white	
NOTES	COLL. NO. 45
NO. OF REPLICATES	

photo

BINOMIAL	
SSP/VAR/F. Cap tan waxy, depressed, tan; gills distant, waxy light	
HABITAT - on ground.	
pink tan, decurrent slight; stalk tan pliant,	
NOTES in a scattered group	COLL. NO. 46
NO. OF REPLICATES	

BINOMIAL	
SSP/VAR/F. Cap, tan grey. small brown umbos; gill white distant,	
HABITAT	
(waxy?) adnate; stalk long covered in scurfy hairs which	
NOTES break into patches when older; long portion	COLL. NO. 47
of stalk sticks in ground.	NO. OF REPLICATES

BINOMIAL	Cap dark umbo rest tan, Amanitopsis		
SSP/VAR/F.	Cap dark umbo rest tan, gills white free,		
HABITAT	on ground and on stumps.		
NOTES	common; a lead cap one was much less common.		COLL. NO. 48 NO. OF REPLICATES
BINOMIAL	Russula		
SSP/VAR/F.	Cap long tan, ^{depressed} gills white obovate; stalk white		
HABITAT	on ground.		
NOTES			COLL. NO. 49 NO. OF REPLICATES
BINOMIAL	Polypore		
SSP/VAR/F.	Fruiting body white, barely stalked.		
HABITAT	on dead small limbs on & laying on ground.		
NOTES			COLL. NO. 50 NO. OF REPLICATES
BINOMIAL			
SSP/VAR/F.	Cap depressed, dark brown, light brown, dark brown, lead brown,		
HABITAT	- gills ^{wavy} wavy(?), white, decurrent slightly, occasionally forked.		
NOTES	stalk white.		COLL. NO. 51 NO. OF REPLICATES
BINOMIAL			
SSP/VAR/F.	holoplane, yellow, cap apiculate - laminate		
HABITAT	shrubby 2nd growth deciduous trees		
NOTES	gills distinct, unequal (very?)		COLL. NO. 51 NO. OF REPLICATES

photo

BINOMIAL	Russula		
SSP/VAR/F.	Cap greenish, some were violaceous green when young;		
HABITAT	rocky woods on ground. deciduous.		
	gills adnate decurrent, white; stalk white.		
NOTES	COLL. NO.	52	
	NO. OF REPLICATES		

photo

BINOMIAL	Amanita		
SSP/VAR/F.	Cap centre orange red yellow, ^{striae} few whitish yellow warts,		
HABITAT	on ground deciduous sugar maple - beech forest.		
	gills white, stalk yellowish-white inc. annulus.		
NOTES	COLL. NO.	53	
An amanita growing w/ this one in expanding button stage killed the worms that fed on it. It may have been this species or not.			
	NO. OF REPLICATES		

photo

BINOMIAL	Hygrophorus ^{agathosmus or hyacinthinus?} Russula foetens		
SSP/VAR/F.	Cap large 5-10.5 cm. very light tan, striate; gills attached		
HABITAT	^{several scattered} open & hop horn beams (Ostrya) rocky area. (savannah-like)		
	white, waxy, somewhat distant; stalk upper $\frac{1}{2}$ white rest tinged		
NOTES	COLL. NO.	54	
with earth brown; sweet very fragrant of sweet marashino cherries ^{goes flesh quickly in heat} but does not rot; insects do not bother it. The smell is long lasting			
	NO. OF REPLICATES		

photo

BINOMIAL	Amanita		
SSP/VAR/F.	Cap 6 cm. dark brown centre ^{rest} very light brown, few scattered		
HABITAT	on ground deciduous forest.		
	brownish white warts, gills white; stalk top $\frac{1}{6}$ white annulus		
NOTES	COLL. NO.	55	
flimsy, white w/ edges brown, most of stalk has brownish scurfy hairs, ^{balls} puffby			
	NO. OF REPLICATES		

photo

BINOMIAL			
SSP/VAR/F.	Cap very finely streaked lead brown, gills, white deep distant,		
HABITAT			
	slightly adnate; many insects present; stalk white		
NOTES	COLL. NO.	56	
	NO. OF REPLICATES		

photo

BINOMIAL	
SSP/VAR/F. whole plant orange; very similar to #51 but stem is scurfy	
HABITAT in rocky grassy areas under partial shade of Quercus rubra.	
and occasionally breaks off into pieces, plant is	
NOTES smaller, in	COLL. NO. 57
NO. OF REPLICATES	

BINOMIAL Russula	
SSP/VAR/F. Cap off white splotted with light rose, gills ?	
HABITAT on ground.	
stalk white.	
NOTES	COLL. NO. 58
NO. OF REPLICATES	

Bolete

BINOMIAL	
SSP/VAR/F. Cap brown; gills white semi depressed, stains	
HABITAT on a log.	
tardily brown; stalk upper $\frac{1}{2}$ has white scurfiness,	
NOTES lower $\frac{4}{5}$ has black scales.	COLL. NO. 59
NO. OF REPLICATES	

BINOMIAL Lactarius	
SSP/VAR/F. Cap brown, wholly depressed; gills brown, bleeds	
HABITAT	
white becoming watery, stalk brown, smell not much,	
NOTES taste bland.	COLL. NO. 60
NO. OF REPLICATES	

BINOMIAL Clitocybe?	
SSP/VAR/F. Cap depressed, tan; gills light tan decurrent;	
HABITAT on dead leaves.	
stalk tan.	
NOTES	COLL. NO. 61
NO. OF REPLICATES	

picture

BINOMIAL	Amanita		
SSP/VAR/F.	Cap brown orange, covered w/ brown white warts		
HABITAT	edge of sugar maple forest path.		
NOTES	gills white w/ edges tinged yellow; stalk, annulus and off yellow, bulb off white, volva yellow.	COLL. NO.	62
		NO. OF REPLICATES	
BINOMIAL	Cap very dark brown, umbellate; gills off white,		
SSP/VAR/F.	distant, decurrent; stalk dark brown.		
HABITAT			
NOTES		COLL. NO.	63
		NO. OF REPLICATES	
BINOMIAL			
SSP/VAR/F.	Cap Tan w/ hairs radiating out from centre almost squamulose,		
HABITAT			
NOTES	gills white free? or adnate, very large bulb.	COLL. NO.	64
	 - glabrous - tomentose off white - scaly brown		NO. OF REPLICATES
BINOMIAL	Hygrophorus nitidus		
SSP/VAR/F.	All parts yellow, all parts waxy. Cap depressed, gills decurrent		
HABITAT	in groups on ground.		
NOTES	- stalk somewhat oppressed.		
		COLL. NO.	65
		NO. OF REPLICATES	
BINOMIAL			
SSP/VAR/F.	Cap, umbo dark rest light tan. gills light tan adnate.		
HABITAT			
NOTES	stalk reddish brown.		
		COLL. NO.	66
	- Kills worm larvae.		NO. OF REPLICATES

BINOMIAL <i>?</i>	
SSP/VAR/F. Cap brown viscid, gills thin, brown, adnate,	
HABITAT - in sphagnum bog.	
stalk crinkate (mm)	
NOTES	COLL. NO. 67
	NO. OF REPLICATES
BINOMIAL <i>Hygrophorus</i>	
SSP/VAR/F. all parts orange Cap. apiculate - compenulate	
HABITAT	
waxy ?	
NOTES	COLL. NO. 68
	NO. OF REPLICATES
BINOMIAL <i>Amanita</i>	
SSP/VAR/F. Cap orange (yellowish on edge), gills white; stalk and	
HABITAT	
annulus yellow to yellowish.	
NOTES Common.	COLL. NO. 69
	NO. OF REPLICATES
BINOMIAL <i>Amanitopsis</i>	
SSP/VAR/F. Cap brown, no annulus, stalk white large volva.	
HABITAT	
NOTES	COLL. NO. 70
	NO. OF REPLICATES
BINOMIAL <i>Hygrophorus Russula foetens</i>	
SSP/VAR/F. Same as #54	
HABITAT	
NOTES - whole plant waxy mushroom worms that ate this species died.	COLL. NO. 71
	NO. OF REPLICATES

BINOMIAL	<i>Russula</i>		
SSP/VAR/F.	Cap rose wine, striate, gills white apparently		
HABITAT	in age turning brown; stalk white		
NOTES	COLL. NO.	72	
		NO. OF REPLICATES	
BINOMIAL	<i>Boletus</i>		
SSP/VAR/F.	Cap dull reddish brown; pores yellowish turn		
HABITAT	blue, stipe eccentric yellowish at apex rest is		
NOTES	COLL. NO.	73	
		NO. OF REPLICATES	
BINOMIAL	<i>Hygrophorus</i>		
SSP/VAR/F.	Cap orange; ^{depressed hairy} gills yellowish decurrent; stipe		
HABITAT	enlarges towards base orange.		
NOTES	COLL. NO.	74	
		NO. OF REPLICATES	
BINOMIAL	<i>Suillus pictus</i>		
SSP/VAR/F.	Cap floccose yellowish w/ patches of appressed red		
HABITAT	hair; pores yellow boletinoid knive brownish,		
NOTES	COLL. NO.	75	
		NO. OF REPLICATES	
BINOMIAL			
SSP/VAR/F.	whole plant yellow; Cap apiculate-campovulate		
HABITAT	shrubby 2nd growth deciduous lawn		
	gills, distant, unequal, waxy		
NOTES	COLL. NO.	76	
		NO. OF REPLICATES

CAN.

MICH

Subularia - has a white pointed core (a) where many of the roots come out. Roots tend to be longer, whiter, more flexible, and more numerous than Littorella. The leaves are oblong in x section (round in Littorella)

Littorella. cross partitions are thick, holes are readily visible w/ a 10x lens (not visible in Subularia)

x section varies from round to plano convex; roots are fewer in # than Subularia, white but an off-white w/ smaller ^{whitish} underground rhizomes on some plants, these appear to break very easily.

- tends to have roots coming from a rounded bottom, but occasionally will have a blunt tap like root going into the sand.

BINOMIAL	<i>Sagittaria graminea</i>		
SSP/VAR/F.			
HABITAT	emergent on sandy beach; many basal (sterile) rosettes emerged in nearby.

When typical *Lycopodium clavatum* grows out from the forest into the open it remains typical. However when ~~up~~ the var. *monostachyon* is found it never originates from the ~~fore~~ a shaded area. The plants are always in very exposed areas except where the forest has obviously recently grown up and the plants are persisting.
